<b>6. Title of proposed action:</b> Revision to Large Mining Operations - Holnam, Incorporated	
<b>7. Description:</b> <b>During Operations:</b> The waste dump will be constructed in stages so that when the first stage is completed, reclamation can begin while subsequent stages are being developed. The operator will pre-strip and stockpile available topsoil from the first stage prior to placement of waste rock material. Topsoil from subsequent stages will be stripped and respread on the previous stage. Adequate drainage control, using best management practices, will be constructed and maintained during operations. The area is under control of the operator and appropriate warning signs will be placed in areas of public access.  <b>After Operations:</b> All disturbed areas will be shaped to blend into surrounding terrain, have topsoil replaced and seeded with the approved seed mix. Ten inches of topsoil will be replaced over all disturbed areas. The use of fertilizer or other soil amendments is not anticipated; however, the operator will test soils prior to resspreading and add appropriate amendments if needed.
